

Celebrate the International Year of Astronomy at Kennedy Planetarium!

You are invited to participate in a spectacular event on November 12, 13, or 20 at Kennedy Planetarium! Two new mural-sized images created by NASA's Hubble Space Telescope, Spitzer Space Telescope, and Chandra X-ray Observatory will continue our celebration of the International Year of Astronomy. The images may be viewed in the hallway near the planetarium from 5:30 – 7:30.

Inside the planetarium, astrophysicist Dr. Philip Sakimoto will provide an explanation of the images and the incredible interactions taking place in the core of our galaxy. The half-hour program will be presented twice each evening at 6:00 and again at 7:00.

Seating is limited. We hope to see you there!
